

Step 1: Wellness Assessment - Understanding Your Physical Health

To be completed by the student.

1.1 Describe your diagnosis or condition and how it affects you. (Include specifics about mobility, endurance, daily limitations, or ongoing care needs)

I have Type 1 Diabetes, which I manage independently using an automated insulin delivery system that includes an insulin pump and continuous glucose monitor. It requires me to monitor my blood sugar and occasionally take insulin or have a snack. It does not limit my mobility, endurance, or participation in daily activities.

1.2 What has been your most challenging or “worst-case scenario” related to this condition?

The most challenging scenario would be a low blood sugar, which I can quickly recognize through how I am feeling and with phone alerts as a back up and treat with fast-acting glucose. In the unlikely event that a low is severe and I am unable to treat independently, I carry emergency Baqsimi, this has never been needed in my over 7 years of diagnosis.

1.3 How often do the above mentioned challenges impact you?

- ☐ Daily
- ☐ A few times a week
- ☐ Once a week
- ☐ Once every month
- ☒ Rarely .
