

Step 2: Plan of Action - Creating your Support Plan

To be completed by the student.

2.1 How can our staff best support your well-being while you are on the program?

No active support is needed. It is helpful for staff to be aware that I may occasionally check my phone to monitor my glucose levels and may need to have a snack.

2.2 What medication, dosage, and frequency are you currently taking and do you plan to take these or other medications while on your program? Are you prescribed any medications that you do NOT plan to take while on your program?

Insulin via an automated pump that happens throughout the day. My phone needs to stay with me to enable the automated delivery and have easy access to my glucose numbers throughout the day.

2.3 If you take medication or use other ongoing support, how can we help you safely and independently maintain those routines during your trip?

I manage all aspects independently. No assistance is needed. Just an understanding that I use my phone occasionally to check numbers and deliver insulin.

Plan of Action: Step 2

How can Maddie's mentor take the information provided and best support Maddie?
