

Mentor Groups = Student Safety

As the leader of a Mentor Group, you are the person who will know your ten students on the deepest level.

- One Mentor getting to know 100+ students deeply is impossible, but 10 students is manageable.

How does a Mentor look out for student safety?

- Medical Information: Allergies, POAs, physical limitations, epi pens
 - Students who are prescribed an epi pen: it is your responsibility to carry one at all times!
- Privileged information: Mental health history, triggers, gender identity that may be kept private
- Confidant: As a staff member a student trusts, they will come to you for help as issues arise, preventing escalation.

Taking roll call and attendance

- Mentor groups are the most common way that we will take attendance for off campus excursions. Always count your students when preparing to leave. When on the bus, count again!
