

Physical Health Conditions

We do have at least 2 students on program with a mobility device that they use partial/full time.

- Students with mobility devices or physical health conditions that affects their ability to navigate with the rest of the group should have their mentor supporting them side-by-side on check-in day and day 1. Their mentor should do a Health Check and discuss what kind of support they'll need on program.
 - Program Directors will be involved too

We have many students with diabetes on program this year.

- CD and Mentor of diabetic students should do a Health Check on check in day to discuss any supports needed or any information in their POA that is unclear. All staff teams on program with diabetic students are REQUIRED to read the student POA and review our diabetic protocol, located in the Staff Manual. [Click here.](#)
